

Pilatus PC-12

Optimize comfort. Upgrade your PC-12.

Together
ahead. **RUAG**

Office in the sky

The cabin of your aircraft is a place of business and relaxation, with the emphasis on stylishness and intelligent functionality. This means that you can travel in a pleasant interior environment with state-of-the-art technology. From upgrades to completely new installations, we are capable of providing you with the latest communication systems while ensuring that you can travel in complete comfort.

Internet

Fly with Swift broadband internet and wireless connection for your mobile phones, tablets and laptops. Featuring speed at 200 KB/second, the Cobham AVIATOR 200 is the lightest, most compact airborne Satcom solution on the market today and is a perfect choice for Pilatus PC-12 operators. With affordable hardware and installation costs, Cobham AVIATOR 200 is everything you need to stay connected when you fly.

Inflight Entertainment System (IFE)

You and your passengers are able to enjoy audio and video on demand (AVOD) with this state-of-the-art wireless system. Combine it with the application Airshow, and it offers the first 3D moving map system for iPad. The system comes fully loaded with worldwide maps that utilize NASA's Blue Marble map data together with many other features. This IFE is a wireless, tablet based solution that provides you with a great opportunity to engage passengers of every age and make their time in your aircraft fly by.

USB charging port

These ports can be right at your fingertips and installed next to your seat. Easily and conveniently charge all your personal devices before landing.

Tablet mounts

This tablet holder features a modern and streamlined design and a robust mounting assembly for your PC-12. Enjoy watching a movie on your tablet device from the comfort of your seat.

Curtains and textiles

Elegant, pleated curtain partitions from RUAG are made from premium quality Swiss fabrics and are designed to match your cabin interior. These stylish curtains are easy to install and may be used for separating both cockpit and baggage compartments.

Enhance your travel experience.

Flexible cabin layouts

The sliding seat

Optimize seat pitch and cabin space for your individual requirements. The sliding seat solution, designed and developed by RUAG Aviation, allows you to easily customize your cabin layout for more comfort at any given time during operations.

Mechanical stretcher kits

Convert your cabin layout from a VIP configuration to medical evacuation (medevac) functionality. The stretcher kit is easy to install and can contribute new sources of revenue by allowing for medical flights, as well as by supporting humanitarian missions.

Integrated solutions for maximum airtime

At RUAG Aviation we provide effective one-stop shop solutions for all your needs.
