CAST-easy – The only flare simulator for training and testing

## CAST-easy

### The only flare simulator for training and testing

Test the performance of your self-protection countermeasure cartridges with RUAG Aviation's CAST-easy electronic flare simulator. It can be used as a direct replacement of standard flare and chaff cartridges, for training and testing purposes on the ground and in the air.

#### Training without limits

Unrestrictive to the flight envelope, the flyable CAST-easy delivers unlimited training capabilities during flight. On the ground it is an excellent tool for testing the functionality of your cartridges.

#### Versatile and easy to use

Compatible with NATO-standard 1x1" countermeasure cartridges, CAST-easy is not dispenser specific. A clearly visible dispensing method and the ability to reset at the push of a button make it extremely simple to handle.

#### Cost-effective solution without pyrotechnics

Reusable with an unlimited shelf life, CAST-easy requires neither maintenance nor pyrotechnicians and hazmat storage. You benefit from logistics advantages, lower operating costs and reduced safety restrictions.

#### A complete solution

Test your complete self-protection system with us: CAST-easy complements missim, our modular 3-in-1 solution for testing all radar, missile and laser sensors of self-protection suites.

**Certified airworthiness**  
RTCA/DO-160G certified  
MIL-STD810G certified
