Newsflash: Cirrus Aircraft now offers Performance Braking System

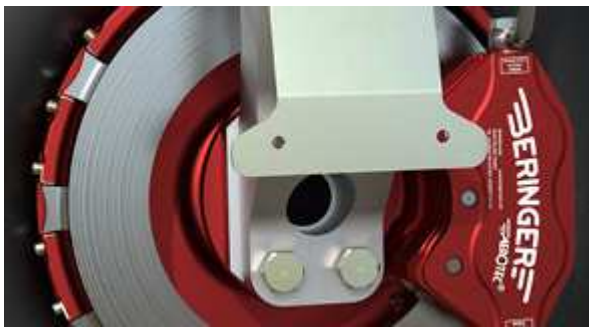

## Newsflash

### Cirrus Aircraft now offers Performance Braking System as aftermarket upgrade for Generation 3 aircraft

#### Performance, reliability and convenience

The Performance Brakes produced by BERINGER AERO use fluid technology designed to withstand higher temperatures, reducing fluid breakdown, and also feature an easily identifiable red temperature indicator. Tubeless tires, a familiar feature in the automotive world, provide peace of mind by reducing the risk of leaks and failures in the higher-stress aviation environment. The easy access door of the wheel fairings adds convenience to inspection and maintenance tasks.

#### All-in-one upgrade

Offered as an upgrade for Generation 3 and above SR-series aircraft, the Performance Braking System includes wheels, brakes, master cylinders, tubeless tires and wheel fairings. It can be purchased from RUAG Aviation's Cirrus Platinum Service Centre.

#### Special introductory offer – get \$1,500 credit

The Performance Braking System has an MSRP starting at \$15,300. For a limited time, Cirrus is offering a \$1,500 credit certificate redeemable at Cirrus Authorised Service Centres with the purchase of the upgrade. This introductory offer is available for orders placed before 31 December 2014 with shipment to take place by 31 March 2015. Supply is limited. Offer terms, pricing and credit certificate are subject to change.
