

# Easy. Comfortable. Relaxing. Falcon 7X Interior Upgrade Programme

Increase availability, enhance passenger comfort, and increase the value of your aircraft. With our unique interior upgrade solutions for your Falcon 7X.

**Together  
ahead. RUAG**

# Increased availability, increased value and optimized downtimes for your Dassault Falcon 7X.

All new and exclusive solutions reserved solely for customers of RUAG Aviation.

Your schedule and your priorities are the most important considerations when factoring downtimes for maintenance and upgrades. We focus on these issues and they drive how we serve our customers. That is why our specialists have developed a new and unique set of Falcon 7X interior upgrade concepts which satisfy these priorities while showcasing your individual style, adding value to your aircraft, and increasing its availability.

Dassault Falcon 7X customers profit from 4 unique, upgrade concepts for adding value to your aircraft:

- new RUAG seat design
- invisible lighting source for illuminated ceiling liners
- luxury theatre for the forward cabin
- seating for 16 passengers

Saving time and costs, your aircraft will be ready when you need it. And, as an Authorised Dassault Service Centre as well as an EASA Part 145 approved organisation, you are ensured the best possible quality and guaranteed certification.

## Refurbish your aircraft seats while keeping your operations going.

Continue to travel with a set of stylish seats from RUAG while your own seats are being refurbished.

Planning for a seats upgrade is now made easy thanks to this unprecedented concept and exclusive service offered by RUAG to our Falcon customers. When your aircraft arrives at our facilities for base maintenance, or even a C-check, the original seats will be removed for full refurbishment and temporary replacement seats will be installed at the same time. Your aircraft is quickly back in service and will continue to fly with the interim loaner shipset – until your original seats are completely refurbished with the new RUAG design.

Upgrading your seating becomes more convenient and the exclusive design further enhances the passenger experience. Engineered with passion, the contemporary design seat provides maximum comfort and ergonomic support in various seating positions. Using high quality finishes, this innovative seat concept is outfitted with carbon-fiber detailing, new upholstery and colours matching your personalised interior, making this seat the right choice for VVIP aircraft and business jet owners. These seats will modernize your aircraft interior, adding value, and ensure a relaxing flight for your guests. This seating upgrade concept is available exclusively from RUAG Aviation in partnership with ACH and M&R associates design.

## Relax under a bright sky at 30000 feet.

Experience the power of lighting and its ability to influence passenger comfort throughout the entire flight.

This unique illuminated headliner concept features state-of-the-art lighting technology with a new invisible light source integrated into the aircraft ceiling. The final effect is a clean, minimalistic modern look offering various options for promoting peaceful relaxation on board your aircraft.

Selecting the "on" function for this elegant lighting concept spreads the light evenly through the headliner surface. Using a pre-designed pattern, a comfortable atmosphere is created inside the aircraft and the space concept is augmented. The intensity can be adjusted from full bright to full dim, offering a customised environment depending on the desired atmosphere. When selecting the "off" function, the ceiling looks exactly as it did prior to modification and the technical installation remains invisible.

As far as creativity is concerned, design options are endless. RUAG Aviation's modification team can customise the lighting pattern according to your preferences: from a company logo to a seamless modern line pattern, or even a blue sky with personalised constellations. This solution is offered exclusively by RUAG Aviation in partnership with Brochier Technologies and AIP.

## Your Falcon 7X is also your flying home theatre.

Sophisticated new theatre makes the most of your time.

The Falcon 7X is a place of business as well as pleasure. To maximize both your options, RUAG Aviation, in partnership with Catherineau

and Aircad, offers an unique inflight entertainment (IFE) concept featuring a 32" HD monitor with the latest audio and video on demand (AVOD) technology. This groundbreaking theatre design brings you an inflight entertainment experience that will go beyond limits and turns the forward VIP cabin into a luxurious VIP theatre.

This state-of-the-art development, designed by RUAG and its partners, offers a system equipped with a dedicated server offering AVOD independently of the existing aircraft IFE and CMS systems, making it a stand-alone installation. The new system, including its 32" monitor, supports all formats of office technologies for presentations as well as video conferencing and virtual office. You can also choose from the wide scope of virtual applications and be fully efficient when focusing on business issues.

Including sophisticated engineering and certification to the latest EASA regulations, a specially designed mechanism deploys the monitor after take-off and allows passengers to enjoy their favourite movies as loaded. The monitor is stowed into an elegant compartment design with shape and colour matching the aircraft interior.

## Optimizing cabin space and profit options.

Increase the seating capacity of the Falcon 7X by adding 2 new seats.

Design elements should also contribute to increased profitability, as well as enhanced passenger comfort. Increasing the seating capacity with two additional seats will allow your Falcon 7X to accommodate up to 16 passengers after modification.

This cabin modification offered exclusively by RUAG Aviation, encompasses reinforcing the cabin floor in the mid cabin on the RHS, as well as installing two new single seats in lieu of an existing credenza or settee. This major modification involves new advanced engineering concepts and skilled interior design capabilities. Available for installation during a C-check, the RUAG team of dedicated specialists will deliver the modified cabin certified.

## Integrated solutions, minimum downtime.

At RUAG Aviation we provide effective one-stop shop solutions for all your needs.
